

## **CONSENT FOR TREATMENT**

### **BOTULINUM TOXIN “A” (Botox® /Dysport® /Xeomin®)**

Botulinum Toxin “A” is a protein and neurotoxin produced by the bacterium Clostridium botulinum. For Cosmetic purposes, botulinum toxin is FDA approved for the hyper-functional lines in the Glabella Region (wrinkles located between the eyebrows). Other areas treated with botulinum toxin for cosmetic purposes are considered off-label use. Botulinum Toxin A can relax the muscles on areas of the face and neck, which cause wrinkles associated with facial expressions. Treatment with Botulinum Toxin A can cause your facial expression lines or wrinkles to essentially disappear. I understand that Botulinum Toxin A cannot improve sagging skin or wrinkles caused by aging or sun damage and understand they are unrelated to muscle contraction. Areas most frequently treated are: a) glabellar area of frown lines, located between the eyebrows; b) crow’s feet (lateral areas of the eyes); and c) forehead wrinkles, however Botulinum Toxin A may also be used in other facial areas. Botulinum Toxin A is diluted to a very controlled solution and when injected into the muscles with a very thin needle, it is almost painless. Clients may feel a slight burning sensation while the solution is being injected. The procedure takes about 15-20 minutes and the results generally last 3-4 months. With repeated treatments, the results may tend to last longer.

### **RISKS AND COMPLICATIONS**

It has been explained to me that there are certain inherent and potential risks and side effects in any minimally invasive procedure and in this specific instance such risks include but are not limited to: 1) Post treatment discomfort, swelling, redness, and bruising, 2) Post treatment bacterial, and/or fungal infection requiring further treatment, 3) Allergic reaction, 4) Minor temporary droop of eyelid(s), eyebrow(s), or corner of the mouth in approximately 2% of injections, this usually lasts 2-3 weeks, 5) Occasional numbness of the forehead lasting up to 2-3 weeks, 6) Transient headache, 7) Double Vision, 8) Rarely, weakened tear duct, and 9) Flu-like symptoms may occur. Known significant risks have been disclosed, yet the theoretical risk of unknown complications does exist. Long-term effects of repeated use of Botulinum Toxin A injections are unknown. Possible risks and complications that have been identified, but are not limited to: 1) Muscle atrophy, 2) Nerve irritability, and 3) Production of antibodies with unknown effect to general health.

This is strictly a voluntary cosmetic procedure. No treatment is necessary or required. Other alternative treatments which vary in sensitivity, effect and duration include: animal-derived or human collagen filler products, hyaluronic acid dermal fillers, dermal fillers derived from the patient’s own fat tissues, and synthetic plastic permanent implants in some cases.

Payment in full for all treatments is required at the time of service and is non-refundable. You may request a price quote before your treatment. If less than 48 hours is given, the deposit may not be refunded.

**RESULTS**

I am aware that when small amounts of purified Botulinum Toxin A are injected into a muscle it results in the weakness/relaxation or temporary paralysis of the muscle and improvement of the lines or wrinkles that the muscle action has formed. Response is usually seen 2-10 days after the injection. Typically, the muscle action (and wrinkles) will return in 3-4 months but can be shorter or longer. At this point, a repeat treatment will relax the muscle and soften the lines again. I understand that the length of response may vary from patient to patient and from one treatment to the next. In a very small number of individuals, the injection does not work as satisfactorily or for as long as usual and rarely, there are some individuals who do not respond at all. It is at the discretion of my practitioner as to whether or not a “touch-up” injection may be needed within the first 14 days of treatment, and I understand if that is the case, an additional charge may incur. I understand that I may not be able to “frown” while the injection is effective but that this will reverse after a period of months at which time re-treatment is appropriate. I am aware that the practice of medicine is not an exact science and I acknowledge that no guarantees have been made or implied to me as to the results of the procedure. I understand that the success of the procedure is to some extent dependent upon my closely following instructions and that I must not perform any vigorous exercise, must stay in the erect posture and I must not massage or manipulate the area(s) of the injections for the 3-4 hours post-injection period. Additionally, utilizing the target muscle groups may help the toxin to take a greater effect.
